

METHOD OF MODIFYING THE RELEASE PROFILE OF  
SUSTAINED RELEASE COMPOSITIONS

ABSTRACT OF THE DISCLOSURE

- The present invention relates to a method for the sustained release *in vivo* of a
- 5 biologically active agent comprising administering to a subject in need of treatment an effective amount of a sustained release composition comprising a biocompatible polymer having the biologically active agent incorporated therein, and a bisphosphonate wherein the bisphosphonate compound is present in an amount sufficient to modify the release profile of the biologically active agent from the sustained release composition.
- 10 Pharmaceutical compositions suitable for use in the method of the invention are also disclosed.
